

# HTML

## Tips and Tricks

# 1. The **start** attribute

Start attribute allows you to specify starting number for your list items.

```
<ol start="20">  
  <li>Pineapple 🍍 </li>  
  <li>Apple 🍏 </li>  
  <li>Greenapple 🍏 </li>  
</ol>
```

20. Pineapple 🍍
21. Apple 🍏
22. Greenapple 🍏

## 2. The **contenteditable** attribute

Set contenteditable attribute to true and your content will be editable

```
<p contenteditable="true">It Can be something about you.</p>
```

It Can be something about

### 3. The **mark** tag

Use mark instead of styling spans to highlight text

```
<p>This is <mark>important</mark> </p>
```

This is **important**

## 4. The **dir** attribute

You can set your text direction from right to left or left to right using direction set dir to auto this will automatically change text direction based on language.

```
<p dir="rtl">Awesome!</p>
```

!emosewA

## 5. The **disabled** attribute

Use disabled attribute for options element to disable a item from dropdown.

```
<select>
  <option>HTML</option>
  <option>CSS</option>
  <option disabled>REACT</option>
</select>
```

CSS

## 6. The **accept** attribute

Accept attributes allows us to specify which types of files user can upload.

```
<input type="file" accept=".jpg, .pdf">
```

## 7. The **lazy** loading attribute

Add lazy loading attribute on media elements this will enhance page performance by defer the loading of media elements until the user scrolls to them.

```
<img src='image.jpg' loading='lazy' alt='Alternative text'>
```
